

- High Grade Ni-Cr Wire Wound element on ceramic Core
- Coated with Heat Insulating Flame Proof Coating.
- High surge withstanding, Suitable for Energy Meters
- Low Temp-Coefficient, High stability.
- Color coded or Printed for easy identification.
- Aryton-Perry winding ensures low inductance.
- Standard tolerance 1%, 2%, 5% available.
- Conforming to JSS 50402.

- Non Inductive Type Wire Wound Resistors available on request.
- Higher Ohmic Values are made as per customer Requirement.
- Miniature & Ultra –miniature are specially developed & available on request.
- Color code/Printing available on request.

Note: Customised variations available on request.

| Characteristics | Test Methods | Limits |
|---------------------------|--|--|
| D C Resistance | Resistors are tested with standard specified voltages for its Ohmic values to check the specified tolerance. | The Resistors shall be within Specified tolerance limits. |
| Short Time Overload | The Resistors shall be subjected to 2.5 times the Rated Voltage or Max overload voltage (Whichever is low) For duration of 5 secs. | $\Delta R\% = \pm 3.0\%$ (+ 0.05 Ω) |
| Temp-Coefficient | The Resistors value shall be checked at 2 temps. i.e. one at Ambient & the final at Amb. + 100 0 C. The TCR is then Calculated as: $\frac{R_2 - R_1}{R_1} \times \frac{1}{t_2 - t_1} \times 10^6 = \text{ppm}/^\circ\text{C}$ | 200 PPM/ $^\circ\text{C}$ (Lower ppm on request) |
| Rated Load | A Rated Continuous Working Voltage or Maximum Working Voltage whichever less shall be applied to the resistors for a duration of 2 Hrs. | $\Delta R\% = \pm 2\%$ Max |
| Solderability | A Solder bath is maintained at 230 $^\circ\text{C}$. The specimen leads are immersed in bath & withdrawn within 3 sec. A suitable Flux is used during this test. | A Fresh solder shall cover the specimen leads by min 95% Coverage. |
| Resistance to solder heat | A Solder bath is maintained at 350 $^\circ\text{C}$. The specimen leads are subjected to bath for duration of 10 sec. | $\Delta R\% = \pm 1\%$ Max |
| Resistance to solvents | The specimen shall be subjected to IPA for duration of 1 min. 10 Strokes of hard brush shall be applied. The test shall be conducted 3 times. | The color code marking shall remain legible. |
| Dielectric strength | A foil is wrapped around the specimen body. A voltage of 300V @0.5 ma shall be applied between both the terminals of the specimen for a duration of 1 min. | There shall be no flash over or break down. |
| Terminal Strength | Pull Test: The Resistor Leads shall be pulled using 5N Force. Bend Test: The resistors leads are bend through 180 $^\circ$ three times | No evidence of mechanical damage. |
| Load Life | The specimen shall be subjected to an ambient of 70 $^\circ\text{C}$ for duration of 1000 Hrs. The specimen shall also be Loaded for full power dissipation. The duty cycle shall be 1 $\frac{1}{2}$ Hr. On & $\frac{1}{2}$ Hr. Off. | $\Delta R\% = \pm 5\%$ Max |
| Surge immunity Test | 6 KV Surge & 10 KV Impulse | $\Delta R\% = \pm 2\%$ Max |
